

Prezado cliente,

A Logical IT alerta para a divulgação de uma campanha de *Phishing* direcionado para **Sistemas Operacionais do Brasil** culminando na instalação do malware "**Astaroth**" utilizado para roubar informações confidenciais de diversos aplicativos em execução nos sistemas infectados.

Segundo reportados pelos pesquisadores de Segurança no Blog da *Talos*. Este malware implementa em seu funcionamento uma série de técnicas para evitar o processo de análise em engenharia reversa e técnicas avançadas de evasão para dificultar a detecção das ações de comando remoto.

Condição de Exploração

As campanhas geralmente começam com um e-mail malicioso. Durante a análise dos pesquisadores da *Talos*, foi observado milhares de e-mails associados a campanhas tentando espalhar o **Astaroth** a partir de meados de 2019. A grande maioria dessas campanhas de e-mail parece ter como alvo específico o Brasil e, como tal, está escrita em português. Nos últimos seis a oito meses, esses atores alavancaram uma variedade de campanhas diferentes, abordando vários tópicos diferentes. Um dos exemplos mais comuns é visto abaixo.

Localiza Hertz

Respeitamos a sua privacidade e somos contra o spam na rede.
Se você não deseja mais receber nossos e-mails, acesse este link.

Essa campanha em particular estava tentando convencer os usuários a clicar em um link que pretendia ser uma fatura vencida - uma tática comum para adversários. O hiperlink no e-mail realmente aponta para um URL diferente do que é mostrado ao usuário. O usuário pode pensar que está clicando em um link para um site de aluguel de carros local no Brasil; no entanto, o link em que o usuário está realmente clicando está abaixo:

**hxxp://wer371ioy8[.]winningeleven3[.]re/CSV500A1V53I0QH9KUH87UNC03
A1S/Arquivo.2809.PDF**

Quando um usuário clica no link, ele é redirecionado para o Google Drive para baixar o arquivo ZIP malicioso real que será analisado nas seções posteriores.

Infecção (Estágio 1)

Os arquivos ZIP mencionados no estágio de delivery contêm arquivos maliciosos de atalho do Microsoft Windows (LNK) que são usados para executar o estágio um do processo de infecção. Eles são usados para realizar um download inicial de conteúdo malicioso adicional e iniciar efetivamente o processo de infecção.

Infecção (Estágio 2)

No final do estágio 1 um arquivo JScript é entregue como parte do estágio do processo de infecção apresentando o uso de vários tipos de ofuscação para tornar a análise mais difícil. A substituição do *CharCode* é usada em todo o script em que os caracteres ASCII foram substituídos por suas representações decimais.

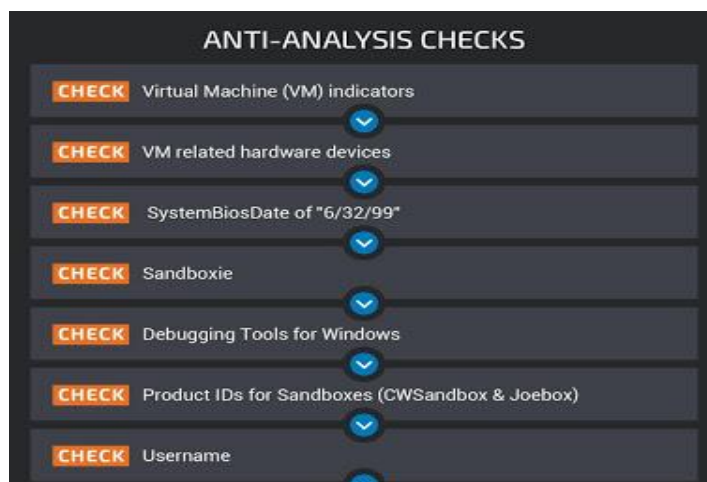

Análise do Malware “Astaroth”

Por fim, após os downloads de todos os componentes realizados no estágio 1 e 2. A *DLL* do Malware “**Astaroth.DLL**” é reconstruída e o malware encontra-se operacional.

Durante a análise pelo time de Segurança da Talos foram detectadas técnicas de “**anti-engenharia reversa**” do malware e durante a execução técnicas de evasão para comunicação do Malware com o centro de comando e controles.

Mecanismos anti-análise / anti-sandbox

O **Astaroth** apresenta uma série robusta de mecanismos anti-análise e anti-sandbox usados para determinar se deve ou não continuar o processo de infecção. O diagrama abaixo fornece uma representação de alto nível dessas verificações, que serão descritas em mais detalhes nesta seção.

Mecanismo de Evasão de Comando e Controle

O malware apresenta um mecanismo C2 redundante com infraestrutura C2 primária e secundária. A principal maneira pela qual o malware se comunica com os servidores C2 é através da recuperação de domínios C2 usando descrições de canal do YouTube.

Os invasores estabeleceram uma série de canais do YouTube e estão aproveitando as descrições dos canais para estabelecer e comunicar uma lista de domínios C2 com os quais os nós na rede de bots devem se comunicar para obter instruções e atualizações adicionais.

```

O time de Pesquisa Talos, afirmou que conforme análise de outras versões anteriores do malware **Astaroth**, as informações dentro do "|||" delimitadores contém uma lista de domínios C2 que foram criptografados e codificados com base64. Conforme exemplificado abaixo:

```

URL: https://www.youtube.com/channel/UC2N4Ej53G7pKYJlA7l0j0SQ/about

Data: UnCoBnCnKnOnTlBnGnPnTnQnNnUlBnInClOnGnYnClGlI1BnInFnHnEnFlBnEnHlOnHnTnGnKlJnIlBoCnOnCnNnMnF

eq7.bghyh.cf;mauahh.vdftrt.ml;oreuer.vfevg.tk;raeuvt.bvijuoi.ml;shae2f.xwcrfcv.ga;

```

Observamos que os dados de descrição do canal mudam periodicamente durante nossa análise. Essa técnica fornece uma maneira interessante de alternar a infraestrutura C2 conforme necessário, aproveitando uma plataforma que geralmente é permitida em ambientes corporativos.

O malware também possui um mecanismo C2 de *fallback* para situações em que as comunicações do **YouTube** podem falhar.

Na amostra analisada, o malware foi configurado para usar a seguinte URL como o canal C2 de *fallback*.

```

hxxps: // sombrio [.] xxapocalipsexx [.] space / amem // dir1 /? 4481829444804 = 184448294448 &
1 = <mensagem C2 codificada em Base64>

```

O sinalizador inicial de sistemas infectados contém várias informações sobre o ambiente e usa o seguinte formato:

```
<timestamp>-Nome:<Malware Version string>-<Hostname>-<Volume ID>-:-[Windows version number]-:-[malware version number]-:-[File size of module G])-:-[File size to module 64])-:-[CPU Architecture]-:-[List of IDs for installed software]-:-[Malware version string again]-:-[System Default Language]
```

Segundo a postagem a análise dos domínios C2 usados pelo malware mostra que a atividade de resolução de DNS parece estar ocorrendo quase exclusivamente no Brasil, como é consistente com as campanhas de distribuição, verificações abrangentes realizadas pelo malware e instituições financeiras cujos clientes estão sendo alvo do malware. No geral, o **Astaroth** adota uma abordagem incomum para a implementação do seu algoritmo de geração de domínio (**DGA**) e a comunicação de atualizações de C2 nos sistemas infectados. O uso de vários mecanismos C2 redundantes o torna particularmente resistente a quedas de infraestrutura.

Recomendação para solução definitiva

Para este tipo de ameaça recomenda-se seguir fatores de mitigação, pois não há soluções definitivas para endereçar este tipo de risco.

Workarounds e Fatores de Mitigação

Ações de Conscientização

Recomenda-se avaliar com cautela os links associados aos e-mails que não sejam referentes a contatos de sua lista confiança. **Sempre valide se é um remetente da sua lista de contatos conhecidos.**

Em caso de e-mails de pessoas de confiança é sempre recomendado validar a URL associada ao hyperlink contido no e-mail, pois pode tratar-se de um canal de entrada para malwares.

Ações de Monitoração

✓ **Filtro de E-mail e Sandbox**

Utilize uma solução corporativa de Segurança de E-mail com funções de análise de URLs e domínios maliciosos por e-mails (***AntiSpam / AntiPhishing***).

✓ **Filtro de Conteúdo Web**

Monitorar acessos a URL suspeitas reportadas nesta lista. As urls de canais do Youtube são um indicativo importante de operação de call-back (comando e controle) em andamento.

✓ **Monitoração de Criação de Arquivos (.lnk)**

É importante monitorar a criação de arquivos *.lnk* oriundas da abertura de um aplicativo que não deve criar atalhos ao se executar. **Ex: Abertura de um Navegador ou Recebimento de E-mail.**

✓ **Anti-malware**

Mantenha sempre uma solução corporativa com funções de (***anti-malware***) para identificar malwares avançados e comunicações com centros de comando e controle.

Monitore e bloqueio os hashes maliciosos apontados por este relatório na seção de ***Indicadores de Comprometimento***

Como a LIT suporta nossos clientes para endereçar o risco destas ameaças no ambiente dos nossos clientes.

Nossos especialistas **coordenarão em paralelo com nossos clientes** um plano para implementação das ações de identificação, detecção e proteção planejadas para controlar o risco de potenciais explorações desta ameaça.

✓ **Identificação da Fragilidade (Gestão de Vulnerabilidades);**

Através do nosso serviço de Gestão de Vulnerabilidades agimos proativamente executando varreduras planejadas com os nossos clientes para identificações específicas para as fragilidades reportadas.

✓ **Detecção de Ameaças (SOC);**

O Nosso serviço do **Centro de Operações de Segurança** usa da base de Inteligência de Ameaças e Base de Conhecimento de comportamento para criar alertas personalizados para monitorar, detectar e caçar explorações destas ameaças, suportando agilidade na resposta e redução de impactos potenciais.

✓ **Proteção de Explorações (MSS);**

Nosso time de MSS trabalhará na análise, planejamento e Implementação de Bloqueio das Ameaças através das soluções de remediação, usando os indicadores de comprometimento aplicáveis para uso de **blacklists**.

O Time da Logical IT está à disposição para mais esclarecimentos.
